

INDEPENDENT AUDIT OPINION

Toitū Verification

To the intended users

Organisation subject to audit: Port of Napier Limited

Audit Criteria: ISO 14064-1:2018
Greenhouse Gas Protocol: A Corporate Accounting and Standard (2004)
ISO 14064-3:2019
Audit & Certification Technical Requirements 3.0

Responsible Party: Port of Napier Limited

Intended users: Board, SMT, Commercial & Finance teams, ESG analysts, Financial analysts,
Shareholders, Financial institutions, Hawkes Bay Regional Council,
Environmental groups

Registered address: Breakwater Road, Napier Port, Napier, 4140, New Zealand

Inventory period: 1/10/2023 - 30/09/2024

Inventory report: FY24_Napier Port Greenhouse Gas Emissions Inventory and Management Report.pdf

We have reviewed the greenhouse gas emissions inventory report ("the inventory report") for the above named Responsible Party for the stated inventory period.

Responsible Party's Responsibilities

The Management of the Responsible Party is responsible for the preparation of the GHG statement in accordance with ISO 14064-1:2018. This responsibility includes the design, implementation and maintenance of internal controls relevant to the preparation of a GHG statement that is free from material misstatement.

Responsibilities of verifiers

Our responsibility as verifiers is to express a verification opinion to the agreed level of assurance on the GHG statement, based on the evidence we have obtained and in accordance with the audit criteria. We conducted our verification engagement as agreed in the audit letter, which define the scope, objectives, criteria and level of assurance of the verification.

The International Standard ISO 14064-3:2019 requires that we comply with ethical requirements and plan and perform the verification to obtain the agreed level of assurance that the GHG emissions, removals and storage in the GHG statement are free from material misstatement.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit carried out in accordance with the ISO 14064-3:2019 Standards will always detect a material misstatement when it exists. The procedures performed on a limited level of assurance vary in nature and timing from, and are less in extent compared to reasonable assurance, which is a high level of assurance. The procedures performed on a limited level of assurance vary in nature and timing from, and are less in extent compared to reasonable assurance, which is a high level of assurance. Misstatements are differences or omissions of amounts or disclosures, and can arise from fraud or error. Misstatements are considered material if, individually or in the aggregate, they could reasonably be expected to influence the decisions of readers, taken on the basis of the information we audited.

GHG quantification is subject to inherent uncertainty because of incomplete scientific knowledge used to determine emissions factors and the values needed to combine emissions of different gases.

Basis of verification opinion

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Verification

We have undertaken a verification engagement relating to the Greenhouse Gas Emissions Inventory Report (the 'Inventory Report')/Emissions Inventory and Management Report of the organisation listed at the top of this statement and described in the emissions inventory report for the period stated above.

The Inventory Report provides information about the greenhouse gas emissions of the organisation for the defined measurement period and is based on historical information. This information is stated in accordance with the requirements of International Standard ISO 14064-1 Greenhouse gases – Part 1: Specification with guidance at the organisation level for quantification and reporting of greenhouse gas emissions and removals (ISO 14064-1:2018).

Verification strategy

Our verification strategy used a combined data and controls testing approach. Evidence-gathering procedures included but were not limited to:

- activities to inspect the completeness of the inventory;
- interviews of site personnel to confirm operational behaviour and standard operating procedures;
- sampling of fuel and electricity records to confirm accuracy of source data into calculations;
- reconciliation of stationary fuel related emissions;

The data examined during the verification were historical in nature.

Basis for modified verification opinion

The following qualifications have been raised in relation to the verification opinion:

The opinion is unmodified.

Verification level of assurance

ISO CATEGORY	LOCATION BASED tCO ₂ e	LEVEL OF ASSURANCE
Direct Emissions:		
Category 1	6,785.18	Reasonable
Indirect emissions from imported energy:		
Category 2	1,011.42	Reasonable
Indirect emissions from transportation		
Category 3	765.18	Reasonable
Indirect emissions from products used by organisation:		
Category 4	177.96	Reasonable
TOTAL NET EMISSIONS	8,739.74	

Responsible party's greenhouse gas assertion (claim)

Port of Napier Limited has measured its greenhouse gas emissions in accordance with ISO 14064-1:2018 in respect of the operational emissions of its organisation

Verification conclusion

We have obtained all the information and explanations we have required. In our opinion, the emissions, removals and storage defined in the inventory report, in all material respects:

- comply with ISO 14064-1:2018 ; and
- provide a true and fair view of the emissions inventory of the Responsible Party for the stated inventory period.

Other information

The responsible party is responsible for the provision of Other Information. The Other Information may include emissions management and reduction plan and purchase of carbon credits, but does not include the information we verified, and our auditor's opinion thereon.

Our opinion on the information we verified does not cover the Other Information and we do not express any form of audit opinion or assurance conclusion thereon. Our responsibility is to read and review the Other Information and consider it in terms of the inventory. In doing so, we consider whether the Other Information is materially inconsistent with the information we verified or our knowledge obtained during the verification.
